In mathematics, a linear form (also known as a linear functional, a one-form, or a covector) is a linear map from a vector space to its field of scalars (often, the real numbers or the complex numbers).. If V is a vector space over a field k , the set of all linear functionals from V to k is itself a vector space over k with addition and scalar multiplication defined pointwise.

Addition (usually signified by the plus symbol $+$) is one of the four basic operations of arithmetic, the other three being subtraction, multiplication and division. The addition of two whole numbers results in the total amount or sum of those values combined. The example in the adjacent image shows a combination of three apples and two apples, making a total of five apples.
