The diesel engine, named after Rudolf Diesel, is an internal combustion engine in which ignition of the fuel is caused by the elevated temperature of the air in the cylinder due to the mechanical compression; thus, the diesel engine is a so-called compression-ignition engine (CI engine). This contrasts with engines using spark plug-ignition of the air-fuel mixture, such as a petrol engine ...

Development Early diesel aircraft. A number of manufacturers built diesel aero engines in the 1920s and 1930s; the best known were the Packard air-cooled radial, and the Junkers Jumo 205, which was moderately successful, but proved unsuitable for combat use in World War II.The Blohm & Voss BV 138 trimotor maritime patrol flying boat, however, was powered with the

Most semi-diesel engines are 2-stroke but there are 4-stroke versions also. In a semi-diesel, once the engine starts the heat source for the hot-head or bulb can be removed; the heat is generated by the combustion itself to continue the ignition process. Typically, semi-diesel engines have from 5:1 to 7:1 compression ratios.
