Solar irradiance is the power per unit area received from the Sun in the form of electromagnetic radiation as measured in the wavelength range of the measuring instrument. The solar irradiance is measured in watt per square metre (W/m<sup>2</sup>) in SI units.Solar irradiance is often integrated over a given time period in order to report the radiant energy emitted into the surrounding environment ...

Solar sails (also called light sails or photon sails) are a method of spacecraft propulsion using radiation pressure exerted by sunlight on large mirrors. A number of spaceflight missions to test solar propulsion and navigation have been proposed since the 1980s. The first spacecraft to make use of the technology was IKAROS, launched in 2010.. A useful analogy to solar sailing may be a sailing ...

A.E. Dixon, in Solar Energy Conversion II, 1981 Amorphous Silicon Cells. Amorphous silicon solar cells are normally prepared by glow discharge, sputtering or by evaporation, and because of the methods of preparation, this is a particularly promising solar cell for large scale fabrication. Because only very thin layers are required, deposited by glow discharge on substrates of glass or ...

How does an electric motor capacitor work? This article gives a short simple explanation of how a motor starting capacitor or motor run capacitor actually works to get a motor spinning or to keep it spinning efficiently. Capacitors are electric devices that get an electric motor running at start-up or that help keep a motor running once it has started.
