A time series is a series of data points indexed (or listed or graphed) in time order. Most commonly, a time series is a sequence taken at successive equally spaced points in time. Thus it is a sequence of discrete-time data. Time Series analysis can be useful to see how a given asset, security or economic variable changes over time.

Mathematical Model for Time Series Analysis. Mathematically, a time series is given as. $y_t = f(t)$ Here, y_t is the value of the variable under study at time t . If the population is the variable under study at the various time period $t_1, t_2, t_3, \dots, t_n$. Then the time series is. $t: t_1, t_2, t_3, \dots, t_n$.
